

DOS Command Interpreter - Programming Project #1

Program/Project Description:

This C program implements a DOS-style command interpreter that translates DOS commands into their UNIX equivalents and executes them on a UNIX/Linux system.

Commands:

DOS Commands	UNIX Commands
cd	cd
dir	ls -la
type	cat
del	rm
ren	mv
copy	cp
pwd	pwd

Compilation:

Go into wherever directory you saved the OS-Group-Assignment1-C folder

Using make:

```
make
```

Manually:

```
gcc -Wall -Wextra -std=c99 -o dos_interpreter dos_interpreter.c
```

Running the program:

```
./dos_interpreter
```

Notes:

I have included an executable file along with the source code and makefile called “setup_test.sh” that you can run with “./setup_test.sh” which will allow for you to easily test each command and provide instructions for how to do so. It will create a test_demo directory where you can test all 7 commands and the error cases by following the instructions.

Files in OS-Group-Assignment1-C:

dos_interpreter.c - source code

Makefile - executable for compilation

setuptest.sh - executable for testing commands

DOS-Command-Interpreter-Screenshots - screenshots of commands

DOS-Command-Interpreter-README.txt - this file
